

Compressed air in the music industry

Pneumobile rap produced

25 March 2013

A fantastic music clip filming took place at the Görzenál ("Roller Skate Arsenal") on Saturday, with the performance of nearly a hundred young people. Animal Cannibals music band rolled to the spot by pneumobile, and, as indicated by some lyrics still secret, they also happen to breath compressed air sometimes.

Bosch Rexroth companies are organizing the highly successful Pneumobile competition for the sixth time in May 2013. 41 teams from 5 countries have applied to the races to prove in Eger with their own-built air-driven vehicles that the construction of their pneumobiles in all their spare time between exams and classes has produced results. The period before the competition holds a number of surprises for both the applicants and their fans, as they have the opportunity to test their abilities in an easier genre: a clip filming after the teaser campaign is going to make final preparations even more memorable. Short films have been recorded of the best moments of the promotional university Garage parties in Autumn, so the long awaited work is made up by the Animal Cannibals' clip filmed in Budapest on Saturday and the most memorable moments of the road show, to be publicly presented in May. The task of the newest event, telemetry, is to design and construct an environmentally friendly vehicle with alternative drive, using the Bosch

Press Release

25 March 2013

Rexroth pneumatic drive, and to present and use the electric control, display and remote control solutions of the vehicles in accordance with industry tendencies, throughout the long-term competition. The vehicles that fully comply with the competition conditions are going to compete on the tournament in May. In addition to the above-mentioned telemetry event, the air-driven vehicles will compete also in the traditional events: prizes will be awarded in the categories of the longest running distance, all-round capabilities and acceleration. Similarly to past years, the most important evaluation factor will be the technical authenticity of the vehicles and the technical standards of the construction.

"It may seem unusual to promote this constructional competition that focuses on technical knowledge transfer and innovation creativity through a video clip. One of the most significant goals of our international competition being organized for the sixth time this year is to show the world and everyday people that engineers are not prodigies sitting in an ivory tower all day long but creative young people most of who are fashionable young guys having a broad international outlook and an ability to work in a team. We hope that the clip filmed with the participation of hundreds of eager youngsters and the hit lyrics coming soon will promote our efforts." said István Gödri, General Manager of the Bosch Rexroth Pneumatika Kft. of Eger.
