

## Information – about the name change of Pneumobile Competition

### **VII. International Aventics Pneumobil Competition – Powered by Bosch Rexroth**

*„Laatzen, Germany, 12th March 2014 – Something's happening in the international pneumatics market: a new standalone company has been created out of the former pneumatics business unit at Bosch Rexroth. Due to a change of ownership, the medium-sized company is now ready to take on the competition around the world under the name Aventics.”*

From the middle of 2014 Bosch Rexroth Pneumatics Ltd. is doing its business under the name of Aventics Hungary Ltd., and a new name was created also for the well-known Pneumobile Competition. Only the name of the – already seventh time organized – race has been changed: VII. International Aventics Pneumobil Competition – Powered by Bosch Rexroth. The distributor of Rexroth products in Hungary, Bosch Rexroth Ltd. is going to continue sponsoring the event.

Pneumobil Competition will be organized on the same location, in the heart of Eger, where we are waiting for the competing teams, supporting professors and the vehicles, which will match their power in 3 race categories. For fans, invited guests and visitors several interesting product- and vehicle-shows, dancing performances, meeting with Norbert Michelisz and real „Érsekkert” festival feeling will be prepared.

### **About Aventics**

*Aventics is a globally active manufacturer of pneumatic components and systems. The company is also a specialist supplier of drive and control solutions for the marine industry and commercial vehicles, as well as inverted tooth chains for production processes. The former subsidiary of Bosch Rexroth has been operating as a standalone company since the start of 2014.*

*Aventics offers its customers tailored, cross-industry system solutions and services based on decades of applied expertise. Aventics is one of the leading suppliers worldwide in the area of industrial pneumatics. The company is a leading technology specialist for pneumatics, for example in the integration of electronics into pneumatics components. With pneumatics solutions for maritime applications and state-of-the-art ship automation systems, Aventics has successfully navigated the world's oceans. The company's drive and inverted tooth conveyor chains are used in numerous sectors and feature strongly in the glass and automobile industries.*

*The company's corporate headquarter is located in Laatzen, near Hanover (Germany) and there are production facilities in Laatzen and Gronau/Leine (Germany), Bonneville (France), Eger (Hungary), Lexington (USA) and Changzhou (China). In addition to its production sites, Aventics has an extensive sales network and is represented in more than 40 countries around the world.*
